

# SPOTLIGHT ON SPOTLIGHT

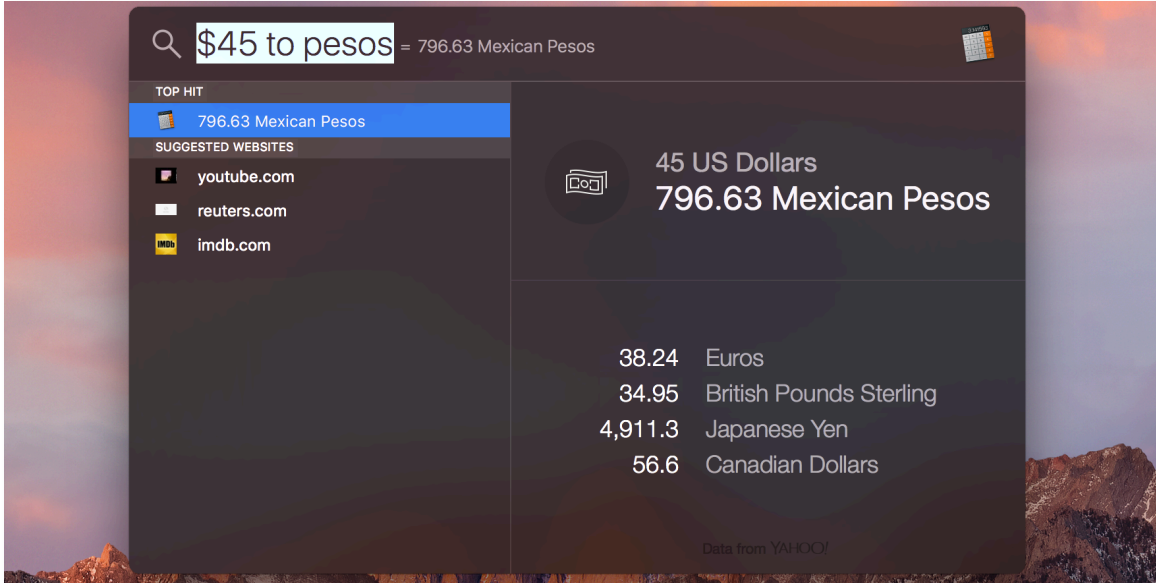

Have you ever needed to convert feet into meters, ounces into pounds or dollars into another currency? Well, apple has made it really easy for you to do that right from your computer. This will work on Mac OS X 10.10 or later. If you have an older version of mac see alternative at the bottom of this article.

On your apple computer you can open up spotlight (the magnifying glass in the upper right corner or press “command + space”) and begin entering the unit you want to convert.

Spotlight will automatically give you several popular conversions; however, if you are looking for a specific unit that is not automatically displayed you can type it like so: “\$45 to pesos”.

The best part about this is that you don't even have to be connected to the Internet! It's built right into the apple computer.

Mac OS X earlier versions can use the calculator app to convert units.
